Gaps between the contigs are represented as runs of N, but he exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequencing vector: Plasmid; Chemistry: Dye-terminator Big Dye: 100% of reads Assembly program: Phrap; version 0.990329 Consensus quality: 108533 bases at least Q40 Consensus quality: 11720 bases at least Q30 Consensus quality: 113548 bases at least Q20

NOTE: This is a 'working draft' sequence. It currently consists of 60 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (13-JUN-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 195701)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Direct Submission

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                             1114

PI Lewin D, Adams SH, Yu XX;

XX WPI; 2002-114569/15.

XX CGI-69 polypeptides and polynucleotides useful for treating metabolic disorders including cachexia, obesity, diabetes and cancers disorders including cachexia, obesity, diabetes and cancers.

XX Claim 1(a); Page 9-10; 107pp; English.

XX Claim 1(a); Page 9-10; 107pp; English.

XX Claim 1(a); Page 9-10; 107pp; English.

XX CAMSOS69), a novel splice variant of human CGI-69. Various CGI-69 concluders included from human liver upon PCR amplification and clones were isolated from human liver upon PCR amplification and clones were isolated from human liver upon PCR amplification and clones were isolated from human liver upon PCR amplification and clones were isolated from human liver upon PCR amplification and clones diversed from the previously known CGI-69 concluders in relates to a novel characterization of CGI-69. CC The invention relates to a novel characterization of CGI-69 as a mitochondrial carrier protein, the discovery of CGI-69. CGI-69 concluding overspression of carboxyl-EnAG-14gged CGI-69. And PLO CC chrouply oversexpression of carboxyl-EnAG-14gged CGI-69. CGI-69 cGI-69. CGI-69 cGI-69. CGI-69 cGI-69. CGI-69. CGI-69. CGI-69. CGI-69 concluding and treating metabolic diseases in humans, including cplicate tissue (BAT) is presented. The mouse orthologe a cissue (BAT) is presented. The mouse orthologe a cissue (BAT) is presented. The mouse orthologe a cissue (BAT) is presented. The mouse orthologe a cissue of increasing or decreasing mitochondrial membrane potential in brown cc contexts of increasing or decreasing docy weight. Decreasing the activity of CGI-69 through gene therapy provides a means of treating metabolic diseases, such as obesity or cachexia, colimical collections and bacterial infections and bacterial infections (CGI-69 through gene therapy provides a mutation in the CGI-69 gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiporitatic; antiporitatic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunosimmlant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antithiflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianemnic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           vectors. The proteins and mucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autofimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antinflammatory disease; to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTGAAGCTTCAAGATGGCTGACCAGGACCCTGCGGGCATCAGCCCCCCTCCAGCAATGGT 182

                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is one of eighteen isolated nucleotide sequences encoding uncoupling proteins. The nucleotide sequences may be used for the detection of various disorders such as cancer, for chromosome identification, as chromosome markers and for numerous other diagnostic or research purposes. The uncoupling protein encoded by the nucleotide sequences may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders, wounds, infectious diseases,
therapy; cancer; wound; infectious disease; thrombosis; arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anyonory Various Carley Cutness were isolated iron indea inversion and incention and cloning. Some diverged from the reviously known CGI-69 sequence in that they encoded an 6-amino version' isoform or CGI-69 (see AAI71019). The invention relates to a novel characterization of CGI-69 as a mitochondrial carrier proceeded by a Wéd, change, and were termed the 'long version' isoform or CGI-69 (See AAI71019). The invention relates to a novel characterization of CGI-69 as a mitochondrial carrier protein, the discovery of CGI-69 is a mitochondrial carrier alteration of the mitochondrial membrane potential through overexpression of carboxyl-FLAG-tagged CGI-69. CGI-69 (including splice variant) nucleic acids and proteins are useful for diagnosing and treating metabolic diseases in humans, including obesity, cachexia and diabetes. Evidence for an important function for CGI-69 in modifying mitochondrial membrane potential in brown adipose tissue (BAT) is presented. The mouse orthologue of CGI-69 is up-regulated in cold-treated BAT. CGI-69 may be involved in calipose tissue (BAT) is presented. The mouse orthologue of CGI-69 is up-regulated in cold-treated BAT. CGI-69 may be involved in calipose and treat specific perturbations in metabolic pathways. Altering the expression of CGI-69 through gene therapy provides a means of treating metabolic diseases, such as obesity or cachexia, or of increasing or decreasing body weight. Decreasing its activity can be used to treat obesity, tumours, cancers, viral infections and bacterial infections, while increasing its activity can be used to creat obesity, tumours, cancers, viral infections and bacterial infections (all claimed). Methods are also calamade for determining whether a compound up regulates or ameaning whether a compound up regulates or ameaning whether a compound up regulates or ameaning per compound to a general processing or a mutation in the CGI-69 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GTATTGCAATGGTGTCCTGGAGCCTCTGTACCTGTGCCCAATGGTGCCCGCTGTGCCAC 380

                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a quen group in the sample or determining the expression profile of a is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB193202 to AB19912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914
                                                                                                                                                                                                                             Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    represent PCR primers for a mouse ischaemic condition related sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360

```
The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     proceins, their complements and sequences that hybridise to them. Also included are a vector comprising the polynucleotide, a host cell transformed with the vector, the proteins encoded by the polynucleotides, antibodies that bind to the proteins and identification of modularors of the proteins or the expression of the polynucleotides.

The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal infections, autoimmune disorders (e.g. rheumatoid architis, multiple sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Six hundred and twenty five polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders

                                                                                                                         also
                               neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are als useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopoidesis, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA sequences encoding a secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

nucleic acid is associated with appticois. The sequences can be used in the diagnosis treatment and prevention of diseases associated with excessive or inadequate apoticois, including tumours, autoimmune diseases, viral infections, degradative diseases (Alzheimer's, Parkinson's and Huntington's diseases), repertusion injury, stroke and alcohol-induced injury to the liver, for identifying agents for treating these diseases, and to prepare transgenic animals in which expression of an apopticois related sequence is altered. These are useful for genetic and/or pharmacological investigations of apopticis and related diseases, including dilatory cardiomyopathy. The present sequence is one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             228

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiporhismian, nootropic; neuroprotective; osceopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antithaematory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The

contacting a biological sample from a patient with (IV), detecting the amount of polymocleotide hybridising to (IV) and comparing the amount to patient, whire the amount of polymocleotide hybridising to (IV) is detected preferably by polymerase chain reaction (PCR) (I) comprising specific for an ovarian tumour protein comprising contacting T cells specific for an ovarian tumour protein comprising contacting T cells with (III) or (III) is useful in design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in tumour cells, and to isolate a full length gene from a suitable library e.g., a tumour cDNA library using well known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a composition (I) comprising: carriers and immunostimulants; and a polypeptide (II) of a ovarian tumour polypeptide encoded by a polymulecide (III) having a cDNA sequence (SI) from the 10912 nuclectide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II). (I) has cytostatic activity. An oligonuclectide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's biological sample prefereibly searum or ovarian tissue. The method comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Composition for therapy and diagnosis of ovarian cancer comprising polypeptide of a ovarian tumor polypeptide, polynucleotide encoding polypeptide, antibody specific to polypeptide or T cell expressing polypeptide -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DB 24; Length 453;

```
The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or calls exposed to the toxin and comparing these to gene expression in unexposed tissues or calls. Also included are methods of predicting at least one toxic effect of a compound or progression in unexposed tissues or calls ample exposed to the compound of two papersons of a toxic effect of a compound, comprising detecting the level of expression in a tissue or call sample exposed to the compound of two or more genes is indicative of at least one toxic effect or progression of the genes is indicative of at least one toxic effect or progression of toxic response and predict callular pathways that a compound modulates the toxic response and predict callular pathways that a compound modulates in a call. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer specifically hybridises to a gene listed in the specification, a computer system computation at tissue or call sample exposed to a hepatotoxin of a
                                                                                                                                                                                                                                                                                                                                       Rat sequence differentially expressed in response to a hepatotoxin #329.

set of genes comprising at least two genes listed in the specification, and a user interface to view the information used to present information identifying the expression level in a tissue or cell of at least one gene listed in the specification. The method is useful for elucidating global
                                                                                                                           gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Heparotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or CDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1096

polynuclectides encoding them, antigen presenting cells which express the polypeptides and vaccines comprising them can be used for inhibiting the development of prostate cancer in a patient. The polypeptides can be used to generate antibodies or anti-idiotypic antibodies for passive immuno therapy. A portion of the polynuclate the expression of the polypeptides can be used as a probe or Lo modulate the expression of the polypeptides. AAMOGA1 to AAMOGO1 and AAM32000 to AAW32020 represent sequences used in the exemplification of
                                                                                                                        The present invention describes isolated polypeptides, comprising an immunogenic portion of a prostate tumour protein (PTP). The polypeptides and polynucleotides encoding them have cytostatic activity and can be used in vaccines and in gene therapy. The polypeptides and
